To whom it may concern,

I am interested in the Senior Front End Developer position at Railroad19. I believe I have the skills and knowledge to meet and exceed the expectations set forth for the position.

Throughout my career I have interacted with many stakeholders and fostered great working relationships in various projects. On more than one occasion I have communicated directly with the CEO of organizations about the progress of my undertakings, giving me great insight into creating valuable relationships with high-level stakeholders.

I am also highly skilled in numerous technologies, many of which I have had to teach myself on the job. In my most recent position, I was required to learn React.js so that our company could convert our entire site infrastructure to the framework. Our task was completed right on schedule and I continued to learn and grow with the technology, greatly improving my skills.

I am confident that my extensive experience qualifies me for consideration. My resume is included, and I can provide a list of references if desired. I look forward to discussing this opportunity in more detail.

Sincerely,

Tony Trucco
